

Kev's Guide to - Spiders

Beginning with removing the webs with a web brush, this will change the look of your home as well as saving you a job. But most importantly the treatment will last longer because now the chemical can be applied in all the cracks and crevices where spider's hideaway, not just on the webs because once there removed, so is the chemical. This is why we can offer a 6-month warranty.

Interesting fact: Spiders travel in the wind, it's called ballooning. Spiders climb to the highest point then pull-out silk, when there is enough silk out to carrier them in the wind they let go and drift to wherever the wind takes them.

Once all webs are removed, we can commence with spraying, all fence lines, sheds inside & out, patios, carports/garages, window frames EVERYWHERE is sprayed. We dust the roof void with a chemical powder which will take care of all the spiders up there, as well as the ones that have webs on your tiles but live in the ceiling. Then finish off with a internal spray of the cornices if you wish.

Approx. price \$300 based on a single story home on an average 750sqm block size.
